## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James McGlew (#31,903) on 07/24/2008.

### **IN THE CLAIMS**

6. **(Currently Amended)** A medical active ingredient dispensing system, comprising:

- a carrier liquid container;

- a supply line leading from said carrier liquid container to a patient;

- a module with a base part having a coupler including a first side coupler part and a second side coupler part for receiving and sending electricity and data for series connection with a base part having a coupler of another adjacent module, and a cartridge with a fluid interface for connection to the supply line leading to the patient, said cartridge for receiving and holding a medical active ingredient and including a delivery device for delivering the medical active ingredient from said cartridge to said fluid interface and into said carrier liquid in said supply line, said base part having a cartridge holding means for accommodating said cartridge and positioning said fluid interface relative to said base and relative to the supply line; and

another module with a base part having a coupler including a first side coupler part and a second side coupler part for receiving and sending electricity and data for series connection with a base part having a coupler of another adjacent module, and a cartridge with a fluid interface for connection to the supply line leading to the patient, said cartridge for receiving and holding a medical active ingredient and including a delivery device for delivering the medical active ingredient from said cartridge to said fluid interface and into said carrier liquid in said supply line, said base part of said another module having a cartridge holding means for accommodating said cartridge of said another module and positioning said fluid interface of said another module relative to said base of said another module and relative to the supply line, said module and said another module being coupled in series with one of said first side coupler part and second side coupler part of said module coupled with one of said first side coupler part and second side coupler part of said another module and with each of said module fluid interface and said another module fluid interface connected to said supply line; and an evaluating and control unit for processing data from connected modules and for receiving stored information, said evaluation and control unit being connected to each of said module and said another module via one of said first side coupler part of said module, said second side coupler part of said module, said first side coupler part of said another module and said second side coupler part of said another module.

13. **(Currently Amended)** A system in accordance with claim 12, ~~further comprising:~~  
~~an~~ wherein said stored information received by said evaluating and control unit for

~~processing data from connected modules and for receiving~~ includes information stored on the code, ~~said evaluation and control unit being connected to each of said module and said another module via one of said first side coupler part of said module, said second side coupler part of said module, said first side coupler part of said another module and said second side coupler part of said another module.~~

***Allowable Subject Matter***

Claims 6 and 8-19 are allowed over the prior art of record as amended in the 3/25/2008 and the Examiner's amendment above.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of drug delivery system comprising a series of modules that are connected with a control system that allows for independent active drug agents to be introduced into a supply line such as a infusion line of respiration tube with each module having a coupling mechanism used to receive a cartridge and a to send data and electrical power to a successive module.

The closest prior art of record is Prendergast (USPN,5873,731) and Morris et al. (USPN7,150,724), however these references do not disclose the device as claimed or described above.

Regarding claims 6 and 14, the closest prior art of record fails to teach among all the limitations or render obvious the modules with the coupling elements that are used

to serially connect and control the modules relative to the supply line without interrupting the fluid flow during patient treatment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
